

OD BOX

Guitar Overdrive

OD Box is a new overdrive with an extraordinary dynamics. Although it has classical controls, its circuits is substantially different from other ods and allows sound and dynamic control impossible with other effects. Beyond to classic pots for Drive, Tone and Control, OD Box has a three position switch named Shape for distortion selection: in position 1 (down) you will have a classical, creamy, soft sound; in position 2 (centre) and 3 (up) you will have more aggressive notes. Sustain, definition and tone are the unique characteristics of this overdrive.

True bypass circuit has an innovative solution, based on a gold plated relais, which excludes the passage of the signal through the stop preserving all the frequencies when in bypass. Power supply is both internal by a 9V battery and external by a stabilized power supply. Power consumption is about 20mA.

Shape in position #1 (down): classical overdrive, soft, creamy, a bit nose tone, perfect for blues and fusion.

Shape in position #2: (centre): the most extreme tone, with boosted extremes of bandwidth and a bass depth unknown in the other ods. For modern sound.

Shape in position #3 (up): a sound between 1 and 2 with a well defined character: sharp attack and definition of the notes let you recreate the best British sound.

Questo prodotto è conforme ai regolamenti della UE in merito a sicurezza e compatibilità elettromagnetica. Il marchio CE indica tale ottemperanza. Inoltre, anche se la politica ambientale della MGD limita al minimo l'uso di materiali e componenti potenzialmente inquinanti, in base ai correnti regolamenti comunitari questo apparato deve essere smaltito in contenitori per rifiuti contenenti componenti elettronici.

This product is compliant to EU rules about safety and electromagnetic compatibility. CE mark indicates the compliance. Furthermore, even if ambient policy of MGD limits at the minimum the use of potentially polluting components, according to current EU laws customer must waste this device in sites or baskets dedicated to "special waste" and/or electronic components.
